

# NO-SEE-UM NETTING PROTECT YOUR CROP!

## OUR UNIQUE POLY-FASTENER® SEALING SYSTEM

Use our easy-to-use Poly-Fastener® to attach the NO-SEE-UM netting to your greenhouses. Suited to your netting thickness.

Attach your NO-SEE-UM netting with the Poly-Fastener® system the simple way.

**Poly-Fastener® PVC 12-year prorated warranty on U.V. degradation**

**Nail, staple, pop-rivet, or screw on the Poly-Fastener® channel to the greenhouse frame using the flange part of the panel. Then place the NO-SEE-UM netting over the channel and snap in the locking strip and the netting into the channel. Attach the netting at the top of the greenhouse opening first and let it drape down. Repeat the same procedure at the bottom and complete the remaining sides. Leave 1-2 inches of netting around edge of channeling when trimming.**

**We recommend using our plastic zip-tool to speed up the installation. It works in a zipper-like fashion. The mesh is easily removed by pulling out the insert strip when replacing the old mesh.**

**It may be essential to maximize the airflow capacity of the fan in some greenhouses to alleviate the problem of reduced airflow.**
